A unique methodology

Apave Aeroservices has specifically developed its own methodology for safety performance assessment combining:

- + Vertical risks
RBSR© - Risk Based Safety Review using the "Farmer" risk matrix to assess the operator's safety level, based on questionnaires in 13 different areas and taking into account any identified non-compliances and/or risks affecting safety.
- + A cross-functional **HOSF© - Human & Organisational Safety Factors** assessment based on the identification and analysis of interactions within the company while focusing on real-world operations and organisational dynamics.
